

### At - A- Glance

#### ASSESS:

1. # of branch offices/branch users
2. OS Platforms
3. Branch App & Data needs
4. Branch locations/ WAN latency
5. Existing datacenter storage and server capacity

#### DESIGN:

1. Network infrastructure
2. WAN Optimization & WAFS
3. Storage & Server Infrastructure

#### BUILD:

1. Install hardware
2. Test environment
3. Migrate branch data and servers

#### MANAGE:

1. Set up active alerts
2. Ongoing assessments, branch consolidations and branch office additions

It is estimated that 75% of company data resides outside of the datacenter. In addition to the costs and compliance concerns, data protection becomes a major issue. It is difficult for companies to ensure backup and recovery options at branches adequate. Often times branches are understaffed when it comes to IT. However, consolidating IT resources from the branch to the core presents a host of complexities. We have learned how to overcome these complexities and enable branch consolidation.

PAR4 has created a practice focused on consolidating branch office servers, storage, and desktops through Desktop Virtualization, WAN Optimization, and Wide Area File Services. We implement the technologies necessary for your branch offices to access corporate IT resources at LAN speeds. We then help migrate data to your central location where it can be consistently managed and protected.

Following the traditional PAR4 model, we will work with you to Assess, Design, Implement, and Manage your branch consolidation project.
